one size

Hit That Noggin is an IT company known for providing innovative, real world solutions to healthcare organizations on the Oracle Cerner and Epic platforms.

We fill in the gaps with tailored solutions designed to streamline operations, enhance patient and provider experience, and reduce IT maintenance.

all

Our knowledge and ingenuity, coupled with our uniquely collaborative service model and expedient delivery, distinguishes Hit That Noggin.

We know when to standardize and when to tailor solutions to expand our clients' capabilities and more effectively leverage their investment in the Oracle Cerner and Epic platforms.

We work hand-in-hand with a wide array of healthcare providers and clinical staff while adhering to their specialty-specific needs.

And while other consultants may be content to prolong the problem or burden internal IT personnel, we are focused on solutions that are expedient as well as sustainable and maintainable.

We work closely with internal IT departments at all levels to ensure support moving forward.

MODULES & VENUES

HEALTH MAINTENANCE

ONCOLOGY

MATERNITY & WOMEN'S HEALTH

Hit That Noggin has a remarkable track record of highly successful implementations that have enhanced client operations.

With more than 250 go-live conversions and 50+ specialties worked on, our experience shines through in each and every engagement.

Our experienced consultants are not siloed by specialty; They share best practices across all specialties to enhance workflows for all our client healthcare organizations.

We add value by advising our clients in these key areas:

- EHR IT & OPERATIONAL EFFICIENCY
- STAFF AUGMENTATION
- PROJECT MANAGEMENT
- INTEGRATED WORKFLOW SUPPORT
- GO LIVE COMMAND SUPPORT
- TRAINING

INPATIENT PROVIDER & NURSING

we hear you.

Our clients tell us they value the way we engage with all stakeholders — not just leadership — to connect the dots, driving solutions that are functional and meaningful to all end users. That's one reason why every client in our current roster has engaged us again to optimize their workflows across multiple specialties.

"I felt very much like I had a voice in all changes throughout the entire build and design process. My advice to others working with this team is to go all in. Share any and every idea, concern, and frustration. This team is exceptional and if there is a way, they will find it."

— Angie Casto, RN, Nurse Manager, Charleston Area Medical Center Health System OB/GYN

"I greatly enjoyed the team's approach to the work. The team was very easy to communicate with and to reach at any and all hours... It was extremely refreshing to work with a team that could work at the same speed as me. Note writing and Cerner flow is much improved. I would provide my highest recommendation to this team in the future. It's very difficult to find another one as effective."

— Alex Poulsen, DO, Chief Resident, Charleston Area Medical Center Health System OB/GYN

"HTN is a wealth of knowledge for my team…. My programmers are all young/green … so we often rely on the knowledge and expertise of the HTN group to help us understand complexities of workflows and the Cerner build.

The HTN group is ALWAYS willing to share knowledge with my team and that is an invaluable asset to working with them. One example is training my team on the event set hierarchy, which is a cumbersome and finicky piece of the Cerner build. Rather than just pointing out how it should be done or when it was done incorrectly, the HTN team jumped in and helped build up my team and their knowledge on it."

— Carrie Pace, Director of IT (Clinical) Programming, Quality and Compliance, University of South Alabama Health
